GitHub Audit Report

Prepared By	AJ Dehn
Company Name	IT Audit Guy
Report Date	2026-10-28
AuditOps Version	0.1.11
Tests	6
Passed	3 (50.0%)
Failed	3 (50.0%)
Scope	**Organization Name:** itauditguy-training

Test Summary

Test	Result	Risk	Comments
github-repo-003: Repositories are configured so that administrators are subject to branch protection requirements.	Fail	High	- Population: 6 - Passing: 2 (33.3%) - Failing: 4 (66.7%)
github-repo-001: Repositories in the GitHub organization are set to private.	Fail	Informational	- Population: 6 - Passing: 0 (0.0%) - Failing: 6 (100.0%)
github-org-001: GitHub organization settings require users to enable MFA.	Pass	High	
github-repo-002: Repositories are configured to require an approval before a pull request is merged.	Pass	High	- Population: 6 - Passing: 6 (100.0%)
github-org-003: GitHub organization settings prevent members from creating public pages.	Pass	Informational	
github-org-002: GitHub organization settings prevent members from creating public repositories.	Excluded	Informational	N/A - This setting is not enforceable on the current GitHub organization plan.

BACK TO TEST SUMMARY

Test ID	github-repo-003
Test Description	Repositories are configured so that administrators are subject to branch protection requirements.
Risk Rating	High
Test Procedures	1. Called the List organization repositories endpoint to obtain a list of all repositories. 2. Saved the API response: orgs/repos.json. 3. For each repository, performed the following steps: • Called the Get branch protection endpoint to obtain the classic branch protection configuration for the repository's default branch. • Saved the API response: repos/[REPO_NAME]/branch_protection_rules.json. • Called the List repository rulesets endpoint to obtain the rulesets for each repository. • Saved the API response: repos/[REPO_NAME]/rulesets.json. 4. For each repository ruleset, performed the following steps: • Called the Get repository ruleset endpoint to obtain the ruleset's settings. • Saved the API response: repos/[REPO_NAME]/rulesets/[RULE_ID].json. 5. For each repository, inspected the branch protection rules and ruleset(s) to determine whether Administrators were subject to branch protection rules / ruleset requirements.
Conclusion	Fail
Comments	Exceptions Noted. 4 of 6 Repositories did not require administrators to comply with branch protection requirements.

Repository Name	Conclusion	Comments
training	Fail	Administrators are not subject to the applicable branch protection requirements for the repository's default branch (main).
ruleset-no-bypass	Fail	Administrators are not subject to the applicable branch protection requirements for the repository's default branch (main).
bp-no-bypass	Fail	Administrators are not subject to the applicable branch protection requirements for the repository's default branch (main).
compliant-repo	Fail	Administrators are not subject to the applicable branch protection requirements for the repository's default branch (main).

bp-bypass	Pass	
ruleset-bypass	Pass	

BACK TO TEST SUMMARY

Test ID	github-repo-001
Test Description	Repositories in the GitHub organization are set to private.
Risk Rating	Informational
Test Procedures	1. Called the List organization repositories endpoint to obtain a list of all repositories. 2. Saved the API response: orgs/repos.json. 3. For each repository, inspected the 'private' property to determine whether the setting was set to 'true'.
Conclusion	Fail
Comments	Exceptions Noted. 6 of 6 repositories were not set to private.

Repository Name	Conclusion	Comments
training	Fail	
bp-bypass	Fail	
ruleset-bypass	Fail	
ruleset-no-bypass	Fail	
bp-no-bypass	Fail	
compliant-repo	Fail	

BACK TO TEST SUMMARY

Test ID	github-org-001
Test Description	GitHub organization settings require users to enable MFA.
Risk Rating	High
Test Procedures	1. Called the Get an organization endpoint to obtain information about the GitHub organization. 2. Saved the API response: orgs/org_settings.json. 3. Inspected the evidence (orgs/org_settings.json) to determine whether the 'two_factor_requirement_enabled' property was set to 'true'.
Conclusion	Pass

BACK TO TEST SUMMARY

Test ID	github-repo-002
Test Description	Repositories are configured to require an approval before a pull request is merged.
Risk Rating	High
Test Procedures	1. Called the List organization repositories endpoint to obtain a list of all repositories. 2. Saved the API response: orgs/repos.json. 3. For each repository, performed the following steps: • Called the Get branch protection endpoint to obtain the classic branch protection configuration for the repository's default branch. • Saved the API response: repos/[REPO_NAME]/branch_protection_rules.json. • Called the List repository rulesets endpoint to obtain the rulesets for each repository. • Saved the API response: repos/[REPO_NAME]/rulesets.json. 4. For each repository ruleset, performed the following steps: • Called the Get repository ruleset endpoint to obtain the ruleset's settings. • Saved the API response: repos/[REPO_NAME]/rulesets/[RULE_ID].json. 5. For each repository, inspected the classic branch protection configuration and applicable rulesets to determine whether the default branch required changes to be approved before the pull request can be merged.
Conclusion	Pass

Repository Name	Conclusion	Comments
training	Pass	
bp-bypass	Pass	
ruleset-bypass	Pass	
ruleset-no-bypass	Pass	
bp-no-bypass	Pass	
compliant-repo	Pass	

BACK TO TEST SUMMARY

Test ID	github-org-003
Test Description	GitHub organization settings prevent members from creating public pages.
Risk Rating	Informational
Test Procedures	1. Called the Get an organization endpoint to obtain information about the GitHub organization. 2. Saved the API response: orgs/org_settings.json. 3. Inspected the evidence (orgs/org_settings.json) to determine whether the 'members_can_create_public_pages' property was set to 'false'.
Conclusion	Pass
